## DATA AT CHILD LEVEL - CHILD QUESTIONNAIRE

This section describes the variables and their codes found in the file IN\_R5\_OCCH\_OlderChild and several sub files which come directly from the Young Lives Child questionnaire. The following codes are standard across most of the numeric variables in the dataset:

77=Not known - this is where the respondent says they do not know;  
88=Not applicable - this is where the question is not applicable because of a response given to an earlier question;  
99=Missing - the question was missed during fieldwork or was not clearly recorded;  
79=Refused to answer - the respondent did not want to answer the question.

For variables where these values are feasible for the question the missing value codes are negative.

## DATA AT HOUSEHOLD LEVEL – HOUSEHOLD QUESTIONNAIRE

This section describes the variables and their codes found in the file

IN\_R5\_OCCH\_OlderHousehold and several sub files which come directly from the Young Lives Household questionnaire. The following codes are standard across most of the numeric variables in the dataset:

77=Not known - this is where the respondent says they do not know;

88=Not applicable - this is where the question is not applicable because of a response given to an earlier question;

99=Missing - the question was missed during fieldwork or was not clearly recorded;

79=Refused to answer - the respondent did not want to answer the question.

For variables where these values are feasible for the question the missing value codes are negative.

## Younger Child Questionnaire

### India Data Dictionary Younger Cohort

## Data Files

A total of 21 data files are generated from the India Younger Cohort dataset. The three main data files are IN\_R5\_YCCH\_YoungerChild, IN\_R5\_YCCogTest\_YoungerChild and IN\_R5\_YCHH\_YoungerHousehold. The file title: IN\_R5\_YCHH\_YoungerHousehold holds data at the household level (one record per household) and the file titled: IN\_R5\_YCCH\_YoungerChild holds data at the child level (one record per child). The remaining data files hold data at a lower level. For example IN\_R5\_YCHH\_HouseholdRosterR5 has one record for each member of the household - i.e. potentially several records per household. The following table lists the 23 data files which are detailed in the rest of this document.

## DATA AT CHILD LEVEL - CHILD QUESTIONNAIRE

This section describes the variables and their codes found in the file IN\_R5\_YCCH\_YoungerChild and several sub files which come directly from the Young Lives Child questionnaire. The following codes are standard across most of the numeric variables in the dataset:

- 77=Not known - this is where the respondent says they do not know;
- 88=Not applicable - this is where the question is not applicable because of a response given to an earlier question;
- 99=Missing - the question was missed during fieldwork or was not clearly recorded;
- 79=Refused to answer - the respondent did not want to answer the question.

For variables where these values are feasible for the question the missing value codes are negative.
